

## Electric Golf Trolley Benefits

An integral part of the game of golf is moving from shot to shot. After every swing, comes the part for a golfer to move on to the next point from where he can make his next shot. This requires a golfer to walk for about four to five hours during a game. Moreover, he also needs to carry his golf bag along. This adds to the stress of the long walk as a golf bag with all the other items generally weighs thirty to forty pounds. Maximum pressure is exerted on the golfer's neck, lower back and shoulders and this in turn tires these body parts making the golfer weak for his next swing, and thus making it difficult for a golfer to give his best efforts. These might also lead to more serious injuries.

However, in recent times, many assistive types of equipment for the game of golf are being used to avoid these stresses and strains. But not all of them serve the purpose to the fullest extent. Moreover, with a wide choice available, it is more difficult for a golfer to choose what is most suitable for his game. Some of the products which are commonly used to reduce the stress of carrying a load of almost thirty pounds are golf carts, push-pull carts and electric golf trolleys, which are often remote controlled too.

One of the major choices that a golfer can make now is to opt for a golf cart. However, it does not solve the problem entirely. Many of the golf courses restrict golf carts only to paved paths. Moreover, golf carts are also ecologically harmful to the golf course.

Another choice is the push-pull cart. However, this only reduces the stress for carrying the bag and does not help much in any other way. It still requires a golfer to bend down and push or pull the heavy cart along with the heavy bag and navigate it from point to point while taking the long walk around the course.

The perfect choice for a golfer, to reduce these intrinsic hazards of the game of golf, is electric golf trolleys. These electric golf trolleys are battery operated and can be manual or remote controlled. They are lightweight, foldable, easy to carry and store. Fully equipped with battery, charger, toolkit, travel bag and rain hoods, electric golf trolleys have an edge over the other products. Electric golf trolleys with their high-tech drive mechanisms and braking systems provide effortless transportation of golf equipment. Moreover, it does not deprive a golfer of the health benefits of walking. Equipped to suit the needs of a golfer perfectly, electronic golf trolleys will never leave a golfer stranded in the middle of a game or lose focus due to injury or tiredness, thus being the perfect choice.
